SUEZ Platform — AWS MVP Hourly Cost Estimate (EKS Version)

Assumptions: Single instance per component, lowest viable instance sizes, Release 1 MVP. Compute runs on a single small EKS worker node. AI model usage and network egress are not included.

Component	AWS Service	Instance Type / Config	Estimated $ / Hour
API Gateway / Edge	Application Load Balancer	1 ALB	$0.022
Kubernetes Control Plane	Amazon EKS	1 cluster	$0.100
Compute (API + Services + Worker Pods)	EC2 Worker Node	t4g.small	$0.017
Database	Amazon RDS PostgreSQL	db.t4g.micro	$0.018
Cache / Rate Limits	ElastiCache Redis	cache.t4g.micro	$0.017
Object Storage	Amazon S3	Logs + artifacts (light usage)	$0.002
Secrets	AWS Secrets Manager	Few secrets	$0.002
Observability	CloudWatch Logs + Metrics	Low volume	$0.005
Networking	NAT Gateway	1 NAT	$0.045

Estimated Cost Summary

Estimated Hourly Cost: $0.228 / hour
Estimated Monthly Cost (30 days continuous operation): $164.16 / month

Notes

• AI model usage (OpenAI, Bedrock, etc.) is not included because those are token-based costs.
• Network egress charges are not included and depend on traffic volume.
• This estimate assumes very low traffic typical of an MVP or internal pilot.
• Costs scale primarily with compute nodes, database size, and AI usage.
